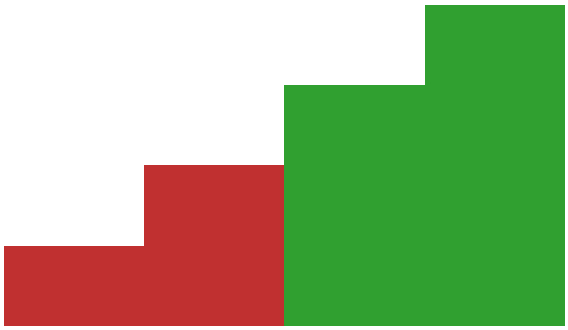
1 Introduction

This sample document is generated in code. It exists so that the converters can be tested against a known input, and every sentence in it is made up for that purpose only.

- First item
- Second item

2 Details

Identifiers such as customfield_10682 keep their underscores, arithmetic such as 2 * 3 = 6 stays as it is, and a paragraph that wraps over several lines comes back as a single paragraph.



3 Summary

The logo in the top corner repeats on every page and is therefore left out, while the chart on the second page is kept as an image.
